get_checklist	<i>Get checklist of native plants around given coordinates</i>
---------------	--

Description

Get a checklist of the native vascular plants around a given point in the Iberian Peninsula

Usage

```
get_checklist(lon = NULL, lat = NULL)
```

Arguments

lon	Numeric. Longitude in geographic coordinates
lat	Numeric. Latitude in geographic coordinates

Value

A dataframe

Note

As the original data (AFLIBER database) have 10-km resolution, the resulting checklist may include taxa present within 10 km distance of the point or polygon.

Examples

```
head(get_checklist(lon = -5, lat = 40))
```

locs	<i>Taxa distributions</i>
------	---------------------------

Description

Taxa distributions

Usage

```
locs
```

Format

locs:

A data frame with 1,824,549 rows and 5 columns:

Taxon taxon

Family family

GBIF_id GBIF ID

lng longitude in decimal degrees

lat latitude in decimal degrees
