--------------	----------

embed_data_html *Embed R data in HTML file*

Description

This function generates HTML code to encode an RData/rda file within the HTML file.

Usage

```
embed_data_html(dataset, textHTML = "Click here to download the data")
```

Arguments

dataset	Character (required). Name of the dataset (RData or rda file) to be embedded in the HTML file (skipping the extension, i.e. rda or Rdata). Must be included within quotes.
textHTML	Character (optional). Text to be shown in the download link.

Author(s)

Richard Morey, slightly modified by F. Rodriguez-Sanchez.

embed_rmd_html *Embed Rmarkdown source code in the output HTML file.*

Description

This function generates HTML code to encode the Rmarkdown source code within the output HTML file.

Usage

```
embed_rmd_html(file)
```

Arguments

file	Character. Name of the Rmarkdown source file (within quotes), e.g. 'myreport.Rmd'
------	---

Author(s)

Ramnath Vaidyanathan, slightly modified by F. Rodriguez-Sanchez.

generate_certificates *Generate certificates*

Description

Automatically generate personal PDF certificates from an Rmarkdown parameterized template and a vector of people names.

Usage

```
generate_certificates(names = NULL, rmd = NULL, outdir = "certificates")
```

Arguments

names	A character vector of people names
rmd	Path to an Rmarkdown parameterized document.
outdir	Output directory where individual certificates will be saved

Value

One or many PDF files with individual certificates

rmdTemplates *A collection of Rmarkdown templates*

Description

A collection of Rmarkdown templates. Include helpful defaults for knitr options, as well as support for citations and different bibliography styles.

Details

After installing the package, click on ‘create new Rmarkdown document’ in Rstudio to have access to the templates. See http://rmarkdown.rstudio.com/developer_document_templates.html for more information.
